

What is being proposed...from LINCOLN TO DAMEN?

The proposal for Berteau from Lincoln to Damen places emphasis on safety and connectivity for all users. A contraflow bike lane and signal for eastbound bicycle traffic on Berteau will better define the roadway, create a safe east/west connection to the existing bike network and provide for safer crossings at Damen. Additionally, this segment will receive enhanced crosswalks, upgraded to the preferred 'continental' striping style for better visibility.

CONTRAFLOW BIKE LANE (RED ON MAP BELOW ●)

Community Concerns:

- Vehicles speeding on Berteau.
- Excessive non-local vehicle traffic.
- Wrong way bike traffic.

Solution:

- A contraflow bike lane provides a dedicated space for eastbound bicycle traffic and a shared lane for westbound bicycle traffic.
- Re-allocating the existing roadway width results in safer average vehicle speeds and improved safety for all users.
- Slower average speeds discourage non-local drivers from using Berteau as a cut through route.

Added Benefits:

- Provide connection between Lincoln and Damen bike routes

Parking Impacts:

- None

BIKE SIGNAL (GREEN ON MAP BELOW ●)

Community Concerns:

- No signal for eastbound bicycle traffic.

Solution:

- Used in combination with the contraflow bike lane, the bike signal head provides a safe crossing for bicyclists at Damen.
- The bike signal will be incorporated into the existing signal phasing; no delay for vehicle traffic.

Added Benefits:

- Makes contraflow bike lane more effective.

Parking Impacts:

- None

ENHANCED CROSSWALKS

(ALL INTERSECTIONS ON BERTEAU FROM LINCOLN TO CLARK)

Community Concerns:

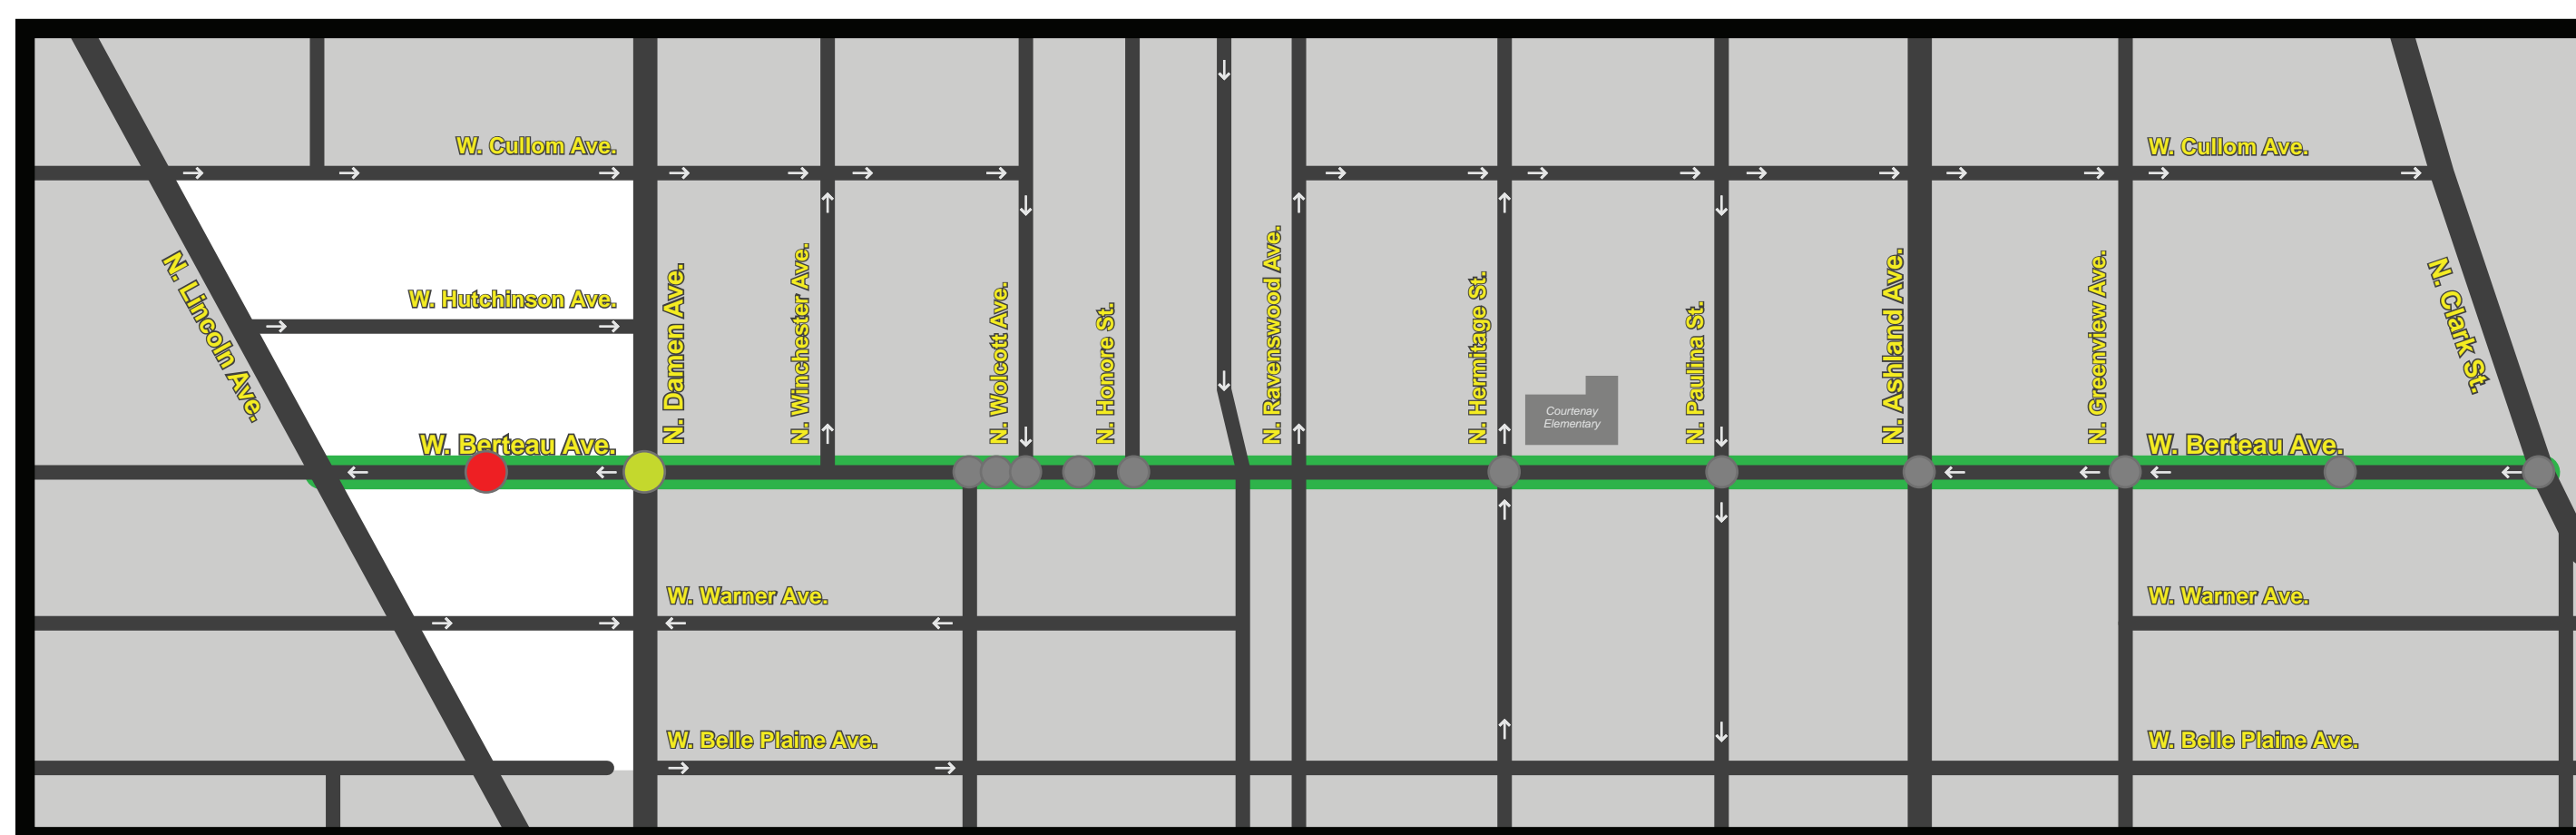

- Improved pedestrian accommodations throughout the corridor.

Solution:

- The enhanced crosswalk design provides a safer crossing than unmarked or traditionally marked crosswalks.
- When combined with additional upgrades like the curb extensions proposed near Courtenay School, enhanced crosswalks can make for a safer crossing.

Parking Impacts:

- None.
